Open to relocation to Tel Aviv, Israel · Available for shift work and travel up to 50%

16 August 2026

Hiring Team

Data Center Operations / Global Server Operations

Google · Tel Aviv, Israel

Re: Data Center Operations Manager, Global Server Operations (Tel Aviv)

Dear Hiring Team,

I am applying for the Data Center Operations Manager, Global Server Operations role in Tel Aviv. With 9+ years supporting computing infrastructure, networking, operating systems, and hardware across financial, telecom, and critical-infrastructure environments, I am motivated by Google's focus on keeping physical infrastructure reliable, safe, and available at scale. I am prepared to relocate to Tel Aviv, work non-standard and shift-based hours, and travel as required.

In my current role as Senior Systems & Applications Specialist / Data Center NOC Support at Bank of Ghana (FICSOC) with Virtual InfoSec Africa, I help protect uptime in a high-assurance environment. I monitor data center infrastructure—including power, cooling, cabling, and hardware—track network and application health with SIEM/NOC tooling, and lead technical incident investigations through documentation and escalation. I also coordinate vendors and contractors on equipment delivery and installation, reinforce operational and security procedures, and use monitoring trends to identify opportunities for improvement.

At Sophies Group, I delivered technical assessments and remediation guidance across Ghana, Nigeria, and Tanzania, strengthening my ability to execute in a multi-country delivery model. I assessed physical and configuration controls, supported complex troubleshooting and migration readiness, and coached 60+ staff to reinforce on-site security culture. At Helios Towers Ghana, I validated operational data across 500+ tower sites, partnered with engineering on EPA allowances and power optimization, and supported contract verification and compliance tracking. Earlier roles at GRIDCo and the Volta River Authority built hands-on experience with hardware support, Active Directory, patching, cabling, and backup/restore in national critical-infrastructure settings.

I am drawn to this role's mix of people leadership, third-party data center operations, installation quality, troubleshooting ownership, and EHS collaboration. I bring a practical operations mindset, strong cross-team coordination habits, and a commitment to procedures that protect availability and safety. I would welcome the chance to discuss how my infrastructure and delivery experience can support Google Global Server Operations in Tel Aviv.

Thank you for your time and consideration.

Sincerely,

Richard Kwame Appiah
